POLICY DOCUMENT ON ENVIRONMENT AND ENERGY USAGE

To reduce its environmental effect, RERFGI is dedicated to maintaining a methodical approach. In order to minimize energy consumption and overall pollution on a local and worldwide scale, and to identify alternative natural resources that can address the energy issue, the college's environmental and energy usage policy encourages research into renewable energy sources. Its institution's numerous operations and all of its constituent parts must abide by its environment and energy policy, which also applies to all of its participants. We may use efficiency and environmental awareness to conserve natural resources and keep their utilization to a minimum.

Policies:

- To install and use a rainwater harvesting system;
- to start a tree planting campaign;
- to install LED lights that use little energy;
- to install solar panels for the generation of green energy and use them strategically;
- to use bicycles and electric vehicles to reduce fuel consumption and improve air quality.
- To improve the fuel efficiency as well as reduce the carbon dioxide emission and noise, vibration and harshness and minimise the total pollution on local and global basis, proper emerging technology should be used.
- To keep track on and respond to pressing environmental and energy-related issues, as well as to develop the environmental knowledge and expertise of our employees and students in order to enhance our own performance in this area.
- To take further steps to consistently enhance our situation for energy use.
- Use appliances that consume energy wisely, such as lights, fans, and computers.
- When not in use, properly turn off your computer.
